Call for bachelor thesis

Topic:

The transition towards nuclear energy (in the 1960s) and parallels to the present change towards a renewable energy system. (literature review)

Aim:

The thesis is intended to show if today's energy transition raises parallels in comparison to the introduction of the nuclear energy in Germany in the 1960s. The thesis focusses on the energy industry, the political situation and reactions coming from the citizens in both periods of time. Are there similarities in political, industrial and social arguments between the nuclear and energy turnaround?

Results:

- Exposition of the political, industrial and social arguments concerning change towards nuclear energy in 1960. (positive and negative views)
- Comparison of the arguments with the energy turnaround in 2014.
- Point out similarities, parallel developments and differences.
- Conclusion that compares and evaluates both developments.

Advisor:

1. Prof. Dr. Timo Busch
2. Marcel Richert
