We are looking for a:

Student Research Assistant (m/w/d)

to contribute to a project on the distributional effects of environmental policy as part of the Excellence Initiative within the Working Group of Environmental Economics under the direction of Jun.-Prof. Dr. Moritz Drupp.

The post holder will support a research project that aims at providing a more comprehensive perspective on the distributional effects of environmental policies by studying the distributional implications of (potentially) negative effects of environmental policy on companies and workers, and the positive effects of better environmental quality on households. The post holder will support the project by helping to (1) assemble a database that links improvements in environmental quality and income; (2) prepare and evaluate administrative data that links firm outcomes due to carbon pricing and individual income effects.

The ideal candidates should have:

- very good academic performance
- very good knowledge of English
- strong work ethics and good organizational skills
- very good knowledge of data processing softwares (especially EXCEL, Stata or R), or the willingness to learn them
- interest in empirical research

Working time will be 30 hours per month with a current gross hourly wage of € 10.44. The contract will initially be a fixed term appointment until the end of January 2021. We offer a nice, dynamic working environment, flexibility in allocating working hours and insights into the research and teaching activities of our working group.

To apply for this post, please, send us your application in English (attaching a cover letter, which includes the requirements mentioned above, tabular curriculum vitae and proof of your previous academic achievements) via email to Piero Basaglia by **May 15th, 2020**: piero.basaglia@uni-hamburg.de.

Selected candidates will be invited for an interview, which will take place on May 18th 2020 either in person or via Skype/zoom (depending on the COVID19 situation).
