1. Studying Economics

Dear students,

Welcome to the exciting world of economics and the Master of Science in Economics (MSc) program! You have selected a challenging program that will provide you with thorough and rigorous training in modern economic theories and methods, building upon the solid foundation you laid during your Bachelor’s degree.

Economics is a captivating field that explores the intricate workings of our global economy, touching upon everything from individual decision-making to government policies and international trade. Over the course of your studies, you will gain a deep understanding of how economic forces shape our world, and you’ll develop the analytical tools needed to unravel its complexities. Get ready to think critically, ask probing questions, and explore the dynamic landscape of economics.

This study guide provides you with essential insights into the program, including details about the curriculum and assessments. Should you find yourself with questions or in need of further guidance, please do not hesitate to reach out to our staff at the Academic Office Economics, your program director, and the professors and research associates teaching in our program.

Let’s ensure it becomes a fruitful journey together!

Prof. Dr. Olaf Posch
Program Director

2. Master of Science in Economics

2.1 Program profile

Today’s economists face globally competitive and increasingly complex environments in a constantly changing world. The Master of Science in Economics (MSc) at Universität Hamburg responds to these developments by providing thorough and rigorous training in modern economic theories and techniques. It thus effectively prepares its graduates for real-world economic situations and challenges.

The MSc Economics attaches great importance to quantitative skills and emphasises state-of-the-art methods of empirical research. It encourages applied work and relates it to policy. Sound training in best practice methods of mainstream economics is complemented by opportunities for in-depth studies in areas of personal interest in order to initiate the gradual transition to independent research. Overall, the programme is designed for students who wish to pursue a career in the public sector, in private business, in consultancy or in research on both, national and international level.

Students with a strong academic record and research orientation may continue their education by writing a doctoral dissertation under the supervision of a faculty member.

The medium of instruction of the MSc Economics is English.

---

**AT A GLANCE:**

**Majoring in Economics**

**Program title:**
Economics (MSc)

**Specifics:**
Two-year and one-year program

**Total credits:**
120 / 60 ECTS credit points

**Regular period of study:**
4 / 2 semesters

**Program structure:**
Full-time study (part-time study possible)

**Admission:**
Winter semester only

**Application period:**
February 15 – March 31

**Number of places**
35

**Program website:**
[www.wiso.uni-hamburg.de/msc-econ](http://www.wiso.uni-hamburg.de/msc-econ)

**Contacts:**
2.2 Program content and structure

The Master of Science in Economics is offered in two versions of study:

- a regular **two-year version (120 ECTS credit points)**
- and an abbreviated **one-year version (60 ECTS credit points)**.

The program’s regular two-year version has been designed for students whose primary degree consists of three years of studies, equivalent to 180 ECTS credit points. The abbreviated one-year version is open to students who enter the MSc program with a primary degree of 240 ECTS credit points, i.e. four years of studies and an outstanding academic record. It is at the discretion of the program director to decide on students’ suitability for the one-year version.

**Curriculum of the two-year version**

In the regular two-year version of the MSc Economics the curriculum consists of three compulsory modules which are completed in the first semester. During the second and third semester, students may choose ten elective modules from a broad and altering range of courses offered. The fourth semester is devoted to the master’s thesis.

**Curriculum of the one-year version**

In the abbreviated one-year version of the MSc Economics students also study three compulsory modules during the first semester and, in addition, choose two elective modules. For the second semester students study another two elective modules and write their master’s thesis.

### 2.3 Compulsory Modules

Both versions of the MSc program require the completion of three compulsory modules in the first semester. For students of the two-year version, each of these modules includes two interactive lectures: The main lecture on microeconomics, macroeconomics or econometrics and an accompanying lecture which reviews and extends methodological knowledge from the undergraduate education. Students will only be admitted to the one-year program version, if their undergraduate education has made them sufficiently familiar with methodology. They are, hence, not required to take the methodology lectures and will not receive credits for them. However, students of the one-year program version are, of course, welcome to attend these courses if they feel this may be beneficial.

The compulsory modules are structured as follows:

<table>
<thead>
<tr>
<th>Main Lecture</th>
<th>Semester</th>
<th>1.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contact hours per week</td>
<td>4</td>
<td></td>
</tr>
<tr>

<tbody>
<tr>
<td>Compulsory for one-year version</td>
<td>No</td>
</tr>
</tbody>
</table>

**Compulsory Module Advanced Microeconomics**

This module enables students to analyse decision making under uncertainty and risk, to study its impact on the general equilibrium outcome in competitive markets and to evaluate the efficiency of market allocations. In addition, by the end of the module, students have learnt to model and analyse strategic market situations using game theoretic methods. They have gained an overview of the current state of research on selected topics in microeconomics and they are prepared to conduct their own research in this field. The module consists of the following two components:

**Main Lecture**

*Individual Decisions, Games and Markets:*
- Decision theory: preferences, choice rules and utility functions
- Theory of the household and the firm;
- Decisions under risk
- General equilibrium and welfare
- Static and dynamic games
- Games with incomplete information

**Accompanying Lecture**

*Methods of Microeconomic Analysis:*
- Basics of microeconomic methods and methodology
Compulsory Module Advanced Macroeconomics

This module enables students to analyse intertemporal macroeconomic problems for both closed and open economies. Long run vs. short run analysis is properly distinguished. The sensitivity of steady-state results to changes in parameters (comparative statistics) and time paths of adjustment to new steady states (maccodynamics) will be studied. There is a strong focus on the essentials of modern macroeconomics and on the necessary skills to analyse real-world behaviour. By the end of the module, students have gained a balanced overview of the current state of the discipline. The module consists of the following two components:

- **Main Lecture**
  - Elements of Dynamic Macroeconomic Theory:
    - Introduction to real dynamic macroeconomic models on an advanced methodological level
    - Selected problems of dynamic macroeconomic theory
    - Economic growth
    - Fiscal politics and business cycle analysis in models of open economies
    - Exchange rate dynamics

- **Accompanying Lecture**
  - Methods of Macroeconomic Analysis:
    - Basics of macroeconomic methods and methodology, mathematical and computational tools

Compulsory Module Advanced Econometrics

In this module students become familiar with new and up-to-date methods of time series analysis or advanced microeconometrics. By the end of the module, students have learnt to independently conduct empirical research and to tackle problems of applied economics with up-to-date statistical and econometric methods. The module consists of one the following two components:

- **Main Lecture**
  - Estimation and Inference in Econometrics:
    - Stationary and non-stationary time series
    - Modelling of stationary time series
    - Vector autoregressive models
    - Cointegration and error correction models
    - Multiple regression models
    - Logit and probit models
    - Causal methods of estimation

- **Accompanying Lecture**
  - Methods of Econometric Analysis:
    - Basics of econometric methods and methodology, computer exercises

2.4 Elective Modules

Elective modules in theoretical and applied economics give students the opportunity to extend, focus and apply their knowledge based on personal interests. Depending on the version of the program, students have to choose four (one-year version) or ten (two-year version) modules during the course of their studies. Topics change from semester to semester. Recently, courses on the following topics have been offered:

- Advanced Game Theory
- New Keynesian Economics
- Dynamic Optimization
- Game Theory
- Public Choice
- Labour Economics
- History of Economic Thought
- Theory of the Firm
- Behavioural Economics
- International Political Economy
- Rationality in Experimental Economics
- Environmental and Resource Economics
- Climate Dynamics and Climate Economics
- Empirical Labour Economics and the German Socio-Economic Panel (SOEP)
- Economic of Growth and Development
- Health Economics

The course catalogue gives you an overview over the elective modules (see Overview > Faculty of Business, Economics and Social Sciences > Department of Economics > B. Master’s programs).

2.5 Course Regulations

All courses are interactive. Most, but not all of the time is spent on lectures. Students might be required to prepare course materials before and after the class, read scientific literature, solve problem sets in and outside the class, write short assignments, give short presentations in class, participate in classroom discussions etc. Class contributions might be graded and, depending on the type of assessment, might improve the grade of the final exam.
2.6 Master Thesis

Students of the two-year version use the fourth semester to write their master thesis. Prerequisite for admission is the successful completion of all three compulsory modules. Furthermore, students must have acquired at least 48 credit points from elective modules (8 out of 10 modules). In the one-year version students can register for the master’s thesis after completion of the three compulsory modules and two elective modules (12 credit points). The master’s thesis can be written in either English or German. You may propose a topic to your supervisor, who will, in turn, assign the final topic to you. If students are unhappy with the topic, it may be returned and changed with justification once, but only within the first two weeks of the writing period.

2.7 Master Degree

The degree “Master of Science (MSc)” is awarded to those students who have acquired 120 credit points (two-year version) or 60 credit points (one-year version) in the MSc Economics program. The final grade is composed of the weighted average of grades for all modules and the master’s thesis. The weights are defined by the number of credit points associated with each module.

2.8 Exchange Opportunities

Double Degree Hamburg – Essex

In cooperation with the Department of Economics at the University of Essex, the MSc Economic program at Universität Hamburg offers a Double Degree option for master students.

Students interested in an internationally orientated course of studies will be given the opportunity of spending one year each in Germany and the UK in order to obtain a Master degree from both universities. The degree program is aimed at those students who are particularly motivated and have an excellent academic record. Through the degree program, the students profit from the interaction of two cultures, experiencing international relations for themselves. It enables them to benefit from two influential and complementary academic systems, giving them an enriching experience and boosting their employability.

The program offers a high degree of flexibility in deciding what subject areas to focus on during the course of studies.

University of Edinburgh

Students may spend their second semester in the “Scottish Graduate Program in Economics” (SGPE) at the University of Edinburgh. This program combines the research and teaching expertise of eight established Scottish Universities. Up to five elective courses in areas such as Environmental Economics, Financial Economics, Economics of Transition, Development Economics, Industrial Economics, Labor Economics etc. can be studied. The Scottish program is located in the beautiful and historic city of Edinburgh.

Students participating in the exchange program will have to pay the tuition charged by the local university.

For further information on the SGPE, please visit:
www.ed.ac.uk/economics/study-with-us/postgraduate/scottish-graduate-programme-economics/prospective-students

Part-time study

Students can apply to study part-time if they have a valid reason for not being able to devote at least half of their working hours to their studies.

For more information, please contact the Campus Center. It is important to check at an early stage whether part-time study is necessary or appropriate for your specific case and what the requirements and procedures are.

Whether you are applying for part-time study or not, it is recommended to contact the program coordination in the Academic Office for advice if you want or need to deviate from the planned study plan. The program coordination will assist you in creating individual study plans and ensuring that you can successfully achieve your study goals.

3. Assessment Framework and Deadlines

3.1 Module and course examinations

All modules end with a module examination. The type of examination at the end of a respective module or class is indicated in the module handbook, which is an appendix to the subject-specific provisions (FSBs). If not indicated in the module handbook, the type of examination will be determined by the lecturer and posted in STiNE at the start of the class. In most modules, courses will finish with a written exam. The instructor may also assign particular course work to the students (short essays, problem sets, oral presentations etc.) and admit only those students for the final exam who have completed the assigned tasks sufficiently well. The instructor can give a bonus for student contributions in the course work. The bonus can improve the final grade for the course by up to 0.7 points.

Examinations are graded as follows:

- **1.0 / 1.3 = very good (outstanding performance)**
- **1.7 / 2.0 / 2.3 = good (above-average performance)**
- **2.7 / 3.0 / 3.3 = satisfactory (average performance)**
- **3.7 / 4.0 = sufficient (satisfies the requirements but contains flaws)**
- **5.0 = insufficient (does not satisfy the requirements due to substantial flaws)**

Once successfully passed, modules and classes cannot be repeated (i.e., grades cannot be improved upon).

Each examination can be attempted up to three times. The final thesis can be repeated once.

The final grade of a module is the weighted average of grades for the module’s respective courses. The weights are defined by the number of credit points associated with each course.

3.2 Conditions for taking part in examinations

In order to take part in a module or course examination, you must have registered in an orderly and timely manner for all of the courses and examinations you wish to take.

3.3 Examination dates and results

Two examination dates per semester are offered for all required written or oral examinations. The first written examination phase takes place immediately after the official semester lecture period. The second written examination dates are usually offered at the end of the reading period (i.e., prior to the start of the next semester). Students are free to choose between the first and second examination date. You can register or withdraw from a written or oral examination up to three days before the examination date.

We recommend signing up for the first examination date and, if necessary, using the second date to repeat the examination if you fail or miss it due to illness. After the second date, the examination cannot be re-attempted until after the class will be offered again. You must re-register for the course in order to be eligible to take the examination.

Observe that elective courses of the second and third semester may not be the same one year later. In this case, students have to attend a different module if they did not pass the first two exams. Overall, no more than two results will be granted.

If you register for an examination date but do not take the examination, the examination will be assessed as “failed” (5.0. If you miss one or more written examination dates due to illness or other reasons beyond your control and withdrawal is no longer possible, then you must immediately submit an application to prevent this missed examination from being assessed as a failed attempt (see Academic Office homepage > “Service”).

You can withdraw from a written or oral examination up to seven days prior to the examination date without stating any reason. You can also withdraw from other types of examinations, such as term papers (see Academic Office homepage > "Service" > "Semester dates and deadlines").

If you are unable to turn in a written paper (term paper, written report accompanying an oral presentation etc.) by the due date for reasons beyond your control, the examination regulations provide for the opportunity to apply for an extension of the working period. The extension application must be submitted prior to the end of the working period and the reason for the extension request must be compelling and adequately verified. In the case of illness, for example, this would be a medical certificate. You can find the appropriate application form on the homepage of the Academic Office.

All examinations are to be assessed by the lecturers as quickly as possible after the examination date and posted in STiNE. The examinations board sets maximum correction deadlines accordingly.

3.4 Assessment glossary

**Attendance requirement:** Attendance is mandatory for all classes, with the exception of lectures. Nevertheless, lecturers are free to abolish mandatory class attendance. If attendance is mandatory, however, you must meet the attendance requirement to be able to sit for the module examination. This requirement is deemed...
satisfied if you miss no more than 15% of classes. If you can provide a good reason for any absence above and beyond this, it will be at lecturers’ discretion whether they deem the attendance requirement met (for instance, if additional coursework documenting your acquisition of the learning material you missed is completed).

Credit points: Credit points are not an indication of the quality of academic performance, but rather define the average workload you can expect for a module or assessment component. Attending courses and independent study, preparing and following up on learning material, and preparing for and completing coursework are all taken into account. According to the European Credit Transfer System (ECTS), one credit point equates to a total of 25–30 hours of work. When an assessment or module is successfully completed, you will be credited the full number of points. This means that the module will only appear in your academic record when it has been completed in full.

In Europe, the terms “credit points” (CP) and “ECTS” are generally used interchangeably. However, if you opt to spend a semester abroad, we recommend you check whether the foreign university uses the ECTS or another system.

Modules: The master degree is organized into modules comprising classes that are thematically linked with one another systematically. Each module concludes with an assessment generally relating to one of the module components (courses). Modules can be required (meaning you must take them), required electives (that you are able to select from a catalog of modules), or free required electives and / or individual courses and classes in the elective area.

Assessments: The assessments you must complete for each module are detailed in the module descriptions. One common assessment type is a term paper. In a term paper, you must consider a prescribed topic covered in the module in question independently, and apply scientific techniques and methodologies. It generally takes several weeks to prepare a term paper, and they are mostly set at the end of the lecture period. Other assessment types include project work, which also involves oral presentation of the work outcomes in addition to a written piece, text analyses, written exams, and an internship report. All assessment types are defined in the examination regulations and the subject-specific provisions and also detailed in the course catalog before the start of class registration (deadlines, examinations, etc.). An assessment is considered passed if the grade of 4.0 (“Sufficient”) or higher is awarded. However, a grade will not be awarded as such.

Coursework: Completed coursework may be prerequisite for you being allowed to sit a module examination. Compared with assessment tasks that must be completed under exam conditions, coursework is a less intensive form of assessment. The possible types of coursework are defined in the subject-specific provisions: course notes, short presentations, group presentations, essays, excerpts or reviews, annotated bibliographies, written tests or examinations, exercises, documentation and reflection on individual learning outcomes, etc. Details of the coursework foreseen for a class will be published in the course catalog at the start of class registration. Coursework is considered passed if the grade of 4.0 (“Sufficient”) or higher is awarded. However, a grade will not be awarded as such.

Coursework: Completed coursework may be prerequisite for you being allowed to sit a module examination. Compared with assessment tasks that must be completed under exam conditions, coursework is a less intensive form of assessment. The possible types of coursework are defined in the subject-specific provisions: course notes, short presentations, group presentations, essays, excerpts or reviews, annotated bibliographies, written tests or examinations, exercises, documentation and reflection on individual learning outcomes, etc. Details of the coursework foreseen for a class will be published in the course catalog at the start of class registration. Coursework is considered passed if the grade of 4.0 (“Sufficient”) or higher is awarded. However, a grade will not be awarded as such.
4. Class and Examination Registration

4.1 STiNE—Universität Hamburg’s student information network

STiNE is Universität Hamburg’s web-based student information network that serves as an information and communication system for students, lecturers, and employees. It is also the central platform for applying to degree programs at Universität Hamburg and registering for courses and examinations. Moreover, it provides an overview of your academic progress and examination results.

You receive your individual login details (ID, password, iTAN block) to log into STiNE at enrollment. Should you not receive these details or experience technical difficulties, please contact the STiNE support service at the Regional Computing Center (RRZ).

STiNE links and support
STiNE Portal:
www.stine.uni-hamburg.de
RRZ-Servicedesk Regional Computing Center
Schlüterstraße 70 Room 15
Contact:
Please use the support form in STiNE to send your questions or problems to the STiNE helpline. You can find this form in the menu (logged-in area) on the left-hand side of the screen.

4.2 Registering for and withdrawing from classes and examinations

In order to participate in classes and examinations, you must register through STiNE.

There are two registration periods in STiNE for this purpose: the first general registration period and a second changes and corrections period that begins after the start of the lecture period and during which you can register for the remaining available places as necessary. We strongly recommend registering for all your courses and examinations during the general registration period as you may not be able to attend any classes in the respective semester if you miss the first registration period. You should therefore check deadlines well in advance and ensure that you have all of the information and login details necessary for registration.

If you have difficulties registering for courses and examinations, please contact STiNE support or the examination manager responsible for your degree program in a timely manner.

Two-step registration:
The MSc Economics has a two-step registration procedure:
1. Module registration
2. Course registration

Only those students registered for the course are also registered for the examination!

Please check STiNE at the end of the general registration period to see if your registration for a class was successful and you can attend it. In this phase, the specific time point of registration is not crucial. In case a course is overbooked the places are assigned randomly. During the changes and corrections period, however, the remaining available places are allotted directly during the registration procedure. Registration for the respective class is binding once the changes and corrections period has ended. You can only deregister yourself from a written or oral examination afterwards.

It is very important to deregister from all classes that you do not wish to attend. Please note that there is no automatic registration or deregistration. It is always your responsibility to register or deregister by the respective deadline.

There is a separate registration procedure for the master’s thesis. Prerequisite for admission is the successful completion of all three compulsory modules. Furthermore, students have acquired at least 48 credit points from elective modules (8 out of 10 modules). In the one-year version, students can register for the master’s thesis after completion of the three compulsory modules and two elective modules.

Registration takes place via a special form available on the homepage of the Academic Office, not through STiNE. In particular, this form documents your thesis topic and your supervisor. We strongly recommend that you begin planning your master’s thesis in a timely manner at the end of your studies and read the specific examination regulations carefully.

Additional information on registering and deregistering from classes, examinations and theses is available on the homepage of the Academic Office.
5. Academic Office in the Department of Economics

5.1 Contact with the Academic Office

The Academic Office supplies students in the Department of Economics with information and services relating to organizing studies in the subject-specific area. All course management tasks for the economics degree programs are handled here. Teams supervise the individual degree programs and offer prospective and current students as well as lecturers' comprehensive advice and services.

5.2 Services

The Academic Office offers advice and services on a wide range of topics. Additional information and required forms can be found on the website of the Academic Office. Topics covered are:

- submitting and picking up examination materials
- recognition and accreditation of coursework and examinations
- registering for and de-registering from courses and examinations
- registering for the final thesis
- studying abroad (outgoing students)
- advising on general organization of studies
- international guest students (incoming students)
- sick notes and extension of working periods
- administration of course account
- compensation for disadvantages
- withdrawing from and missing examinations
- examination board affairs
- examination and academic regulations
- advising on a course of study
- part-time study
- Transcript of Records
- Course Catalog
- degree documents

5.3 Contacts in the Academic Office

The student colleagues at the Service Point will be glad to clear up minor organizational questions for you, help you help yourself, accept applications and examination materials and point you towards the correct contact in the Academic Office during the office hours of the examination managers and program coordinators.

The examination managers administer your examination records and prepare your course account in STiNE for issuing your Transcript of Records and official degree documents. In addition, they can advise you on organizational questions regarding study and examination planning based on both the examination and academic regulations and your course of study.

The program coordinators are responsible for advising on courses of study for specific subjects. You should seek their counsel in particular when you have special requirements or face special challenges in planning your studies such as: recognition and accreditation of coursework and examinations following a change of subject, change of university, or studies abroad; planning a semester abroad or part-time study; complicating conditions in your personal environment; or failure to meet deadlines etc.
Please see the Academic Office website (under “Contact”) for the names and office hours of the person responsible for your specific concerns.

Before visiting the Academic Office, please gather as much information as possible about your concern (from the academic and examination regulations, the website, this Academic Program Guide, your course account etc.). This will enable us to provide you with effective counseling that will help you to successfully organize your studies on your own.

5.4 Additional contacts

5.4.1 Subject-specific matters

Program director
The program director has overall responsibility for the degree program and its further development.

Examinations Board
The board of examiners accepts appeals for consideration.

Instructors
The instructors advise on subject-specific matters relating to lectures and assessment results during their office hours.

www.wiso.uni-hamburg.de/en/fachbereich-vwl/professuren

5.4.2 General student affairs

Universität Hamburg’s Campus Center
Advice on application and admission procedures, enrollment, semester re-enrollment, academic leave, semester documents, part-time study, tuition fees, withdrawal, psychological counseling, and support.

www.uni-hamburg.de/en/campuscenter

5.4.3 Internships, professions, and careers

Universität Hamburg: Career Center
Courses and workshops for professional orientation; provider of professional qualification seminars.

www.uni-hamburg.de/en/career-center

5.4.4 Semester abroad and international affairs

Universität Hamburg: Department of International Affairs
General advice on studying abroad, internships and jobs abroad, further training, scholarships, and grants.

www.uni-hamburg.de/en/internationales

Faculty of Business, Economics and Social Sciences: International Office
Support in organizing semesters abroad, support in all ERASMUS matters before and during the semester abroad.

www.wiso.uni-hamburg.de/en/internationales/international-office.html

University Language Center
Provider of subject-specific foreign language courses.

www.uni-hamburg.de/en/sprachenzentrum

Hamburger Volkshochschule (Hamburg Adult Education Center)
Provider of free on-campus language courses. Please note that placement tests take place before the start of lectures!

www.uni-hamburg.de/en/allgemeinsprachen

5.4.5 Central Academic Advising and Psychological Counseling Services (ZSPB)

The Central Academic Advising and Psychological Counseling Services offer a manifold range of services from information events to group counseling. On a regular basis, it organises seminars and workshops to develop students’ personal strengths and professional qualifications.

For personal questions and problems affecting your studies, you can turn to the psychological counseling services.

<tbody>
<tr>
<td>Title</td>
<td>Advanced Microeconomics</td>
</tr>
<tr>
<td>Type</td>
<td>Required module</td>
</tr>
<tr>
<td>Objectives</td>
<td>Students learn to analyze strategic decision-making situations in settings of certainty and uncertainty, understand their effect on market activity in competitive markets, and evaluate the efficiency of macroeconomic allocations. After completing the module, students will also be in a position to model and analyze strategic market interactions using game theory. Students will have acquired an overview of the current state of research on selected topics in microeconomics and will be able to conduct independent research in the field.</td>
</tr>
<tr>
<td>Curriculum</td>
<td>The module provides students with advanced conceptual and methodological skills that are necessary for dealing with microeconomic issues and research questions independently. (a) Individual Decisions, Games and Markets (4 credit hours per week) - decision theory: preferences, choice rules, and utility functions - theory of the household and the firm - decision-making under uncertainty - general equilibrium theory and welfare - static and dynamic games - games with incomplete information (b) Methods of Microeconomic Analysis (1 credit hour per week) - important elements of microeconomic methods</td>

</table>
| Curriculum   | The module provides students with advanced conceptual and methodological skills that are necessary for dealing with macroeconomic issues and research questions independently. (a) Elements of Dynamic Macroeconomic Theory (4 credit hours per week)  
- introduction to advanced methodology of modern modeling of real dynamic macroeconomic closed economies  
- selected problems of dynamic macroeconomic theory  
- models of new international macroeconomics  
- fiscal policy and business cycle analysis in models of open economies  
- exchange rate dynamics (b) Methods of Macroeconomic Analysis (1 credit hour per week)  
- important elements of macroeconomic methods |
| Types of instruction | Interactive courses |
| Language of instruction | English |
| Prerequisites for participation | None |
| Examination | Type of examination | The final module examination is either written or oral. The exact type of examination shall be announced before the course begins. |
|             | Prerequisites for admission to module examination | Successfully completed coursework, the extent and scope of which shall be announced at the beginning of the course. |
|             | Language | The examination shall be held in English. |
| Workload    | Course workload (components) | (a) Elements of Dynamic Macroeconomic Theory: 8 ECTS credits  
(b) Methods of Macroeconomic Analysis 2 ECTS credits |
<p>|             | Total workload of module: | 10 ECTS credits |
| Semester in which module is taken | Subject semester 1 |
| Module frequency | Once a year |
| Duration | The entire module lasts one semester. |</p>

</tbody>
</table>

**Objectives**

To familiarize students with up-to-date econometric methods necessary for time series data analysis or microeconometric estimation methods. Upon completion of the module, students are able to conduct empirical research independently and, more specifically, use up-to-date statistical methods to create quantitative evaluations on relevant questions relating to economic policy.

**Curriculum**

(a) Estimation and Inference in Econometrics (4 credit hours per week)
- stationary and non-stationary time series
- modeling of stationary time series
- vector autoregressive models
- cointegration and error correction models
or
- multiple regression models
- logit and probit models
- causal estimation models

(b) Methods of Econometric Analysis (1 credit hour per week)
- important elements of the econometric method

**Types of instruction**

Interactive courses with computer exercises

**Language of instruction**

English

**Prerequisites for participation**

None

**Examination**

Type of examination:
The final module examination is either written or oral. The exact type of examination shall be announced before the course begins.

Prerequisites for admission to module examination:
Successfully completed coursework, the extent and scope of which shall be announced at the beginning of the course.

**Language**

English

**Workload**

Course workload (components):
(a) Estimation and Inference in Econometrics: 8 ECTS credits
(b) Methods of Econometric Analysis: 2 ECTS credits

Total workload of module: 10 ECTS credits

**Semester in which module is taken**

Subject semester 1

**Module frequency**

Once a year

**Duration**

The entire module lasts one semester.

<tbody>
<tr>
<td>Title</td>
<td>Several required elective modules are offered each semester</td>
</tr>
<tr>
<td>Type</td>
<td>Required elective module</td>
</tr>
<tr>
<td>Objectives</td>
<td>Students should be able to comprehend and develop further theories relevant to specific fields, such as allocation theory, game theory, monetary theory, and growth theory, and apply these to other areas of economic theory. Moreover, students should be able to derive testable hypotheses from theoretical models. Furthermore, students should acquire the ability to structure, analyze, and quantitatively evaluate practical economic issues affecting labor markets, industrial organizations, and business cycle and growth policies. Upon completing the module, students will have acquired knowledge about the current state of research on selected topics and will be able to carry out independent research.</td>
</tr>
<tr>
<td>Curriculum</td>
<td>Interactive courses (3 credit hours per week) covering current research on theoretical or empirical topics.</td>
